Proximate organic analysis is the determination of the compounds present in a mixture, or of the radicals present in a compound. Both ultimate and proximate analyses are often required in the examination of organic materials. In the case of a complex mixture, however, proximate analysis is frequently directed to the determination of the principal groups of related compounds rather than of each individual compound present. In the analysis of ordinary animal and vegetable substances it is usually assumed that all of the organic matter is made up of not more than six elements - carbon, hydrogen, nitrogen, oxygen, sulphur and phosphorus. Other elements present would usually be found in the ash, though not always without loss as will be explained later. While the results of ultimate analysis are often calculated to the basis of dry, ash-free substance, it is not to be supposed that the ash like the moisture is...
