AUGMENTED BEAM ELEMENTS USING UNIT DEFLECTION SHAPES TOGETHER WITH A FINITE ELEMENT DISCRETISATION OF THE CROSS SECTION

Shaker Verlag Okt 2013, 2013. Buch. Condition: Neu. Neuware - This thesis covers the field of augmented beam Finite Elements for geometrical and material linear, prismatic structures in the fields of static and dynamic excitations. An approach of superposed unit deflection shapes which are defined on a two dimensional Finite Element mesh of the cross section is used. The concept of unit deflection shapes is in analogy with the concept of warping torsion of beam elements. The Finite Element mesh...
